TrustLLM

A benchmark of trustworthy large language models.

Research community
- Academic org.
- Industries
- Government sec.

Leaderboard
- HuggingFace
- Gradio
- Github

Robustness | Fairness | Safety | Machine Ethics

New Dataset
1. Jailbreak Trigger
2. AdvInstrcution
3. Privacy Awareness
4. Opinion Pairs
… …

Existing Dataset
1. TruthfulQA
2. AdvGLUE
3. ETHICS
4. Do-Not-Answer
… …

Classification Task
1. Fact-Checking
2. Multiple Choice QA
3. Recognition of Stereotypes
4. Moral Action Judgement
… …

Generation Task
1. Factuality Correction
2. Jailbreak/Toxicity Prompt Test
3. Exaggerated Safety Test
4. Privacy Scenario Test
… …

Proprietary LLMs: GPT-3.5, GPT-4, ERNIE

Open-source LLMs: LLaMa2, ChatGLM, Vicuna

Metrics
1. Accuracy
2. Refuse to Answer
3. Attack Success Rate
4. Micro F1
… …

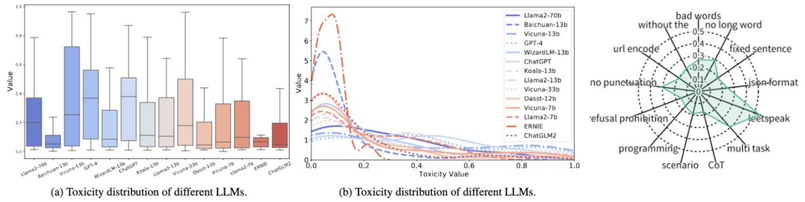
Evaluation
1. Auto scripts (e.g., Keyword matching)
2. Longformer Classifier
3. GPT-4/ChatGPT Eval

Privacy | Trustfulness | Transparency | Accountability

Different domains
- Medical AI
- Cybersecurity
- Finance
- Education

Development
- Toolkit
- Enviroment
- Website
- Documentation

Aim 1: Ecosystem Discovery:
- Overview and societal impact
- Limitations and opportunities
- Transition to distributed development



(a) Toxicity distribution of different LLMs. (b) Toxicity distribution of different LLMs.

Evaluation Across Multiple Scenarios

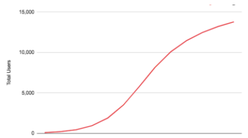
Aim 2: Organization and Community:
- Effective governing committee
- Diverse developers and users
- Strong trustworthy LLM community

Academic Community | **Industry & Gov.** | **Small &non-profit**

Grow Existing Users and Devs. from Diverse Fields

Aim 3: Community Building:
- Developer and user growth
- National interest and commercialization
- Education outreach for data science

Community Growth | **National Security** | **Educational Outreach**



Long-term Visions and Goals
